

## Testing a PriSim® simulation on your computers

---

1. Confirm minimum requirements on all team computers (see list on bottom-right of page).
2. Receive set-up file from PriSim (via email or web site).
3. Save set-up file onto USB drive and add “.exe” to end of filename.
4. Install software on a team computer by plugging in the USB drive and double-clicking the set-up file. Then, follow the prompts.
5. Once the software is installed, a Window will appear showing the simulation (and an uninstall application). Double-click the simulation icon. If Excel prompts you about Macros, select “Enable Macros”. If you are not prompted, you may need to select Tools>Macro>Security and set Security Level to Medium.
6. If the simulation provides you with a message regarding screen resolution simply click OK, but please note what the message says about the screen resolution on the computer.  
Note resolution here: \_\_\_\_\_
7. When the simulation has loaded you will see a Startup Options dialog box. Choose Option 3, "Start a new GENERIC game...”, and then click the ENTER button on the bottom right of the dialog box.
8. Congratulations, the simulation has been installed. Your PriSim contact will now walk you through some quick tests to ensure that the computers will perform well for the teams.
  - Navigation test
  - Calculation test
  - Print test
  - Save/Restore test
  - User form (screen resolution test)
  - User form (calculation test)
  - Exit/Restart test

### Client-Supplied Computer Option

In some situations you may be able to utilize your own computer equipment. If your internal computer systems meet the minimum requirements below, ask your PriSim contact about this cost-saving opportunity.

### Minimum Requirements

- Windows XP or Windows 7 Laptop/Computer with 1.7 Ghz Centrino/Pentium 2.4-GHz or faster. No Celeron chips please!
- Excel 2003 **with SP3**. NOTE: Excel 2007 or 2010 will **NOT** work.
- 17" monitors (or larger) or projectors
- Easily accessible team printers- 22 pages/minute (high-speed laser printers, if networked - no separator pages)
- 2 available/open USB ports
- No passwords on screen-savers
- PriSim able to power-up system and log-in to computer
- Hard-drive is not wiped at night
- Teams can adequately "huddle" around monitor (i.e., is an external keyboard and mouse required)
- Client must provide someone to physically set up the computers
