

# USING YOUR COMPUTERS FOR A PRISIM BUSINESS SIMULATION

Each team will require:

- Windows-based (10) laptop with the ability to run Amazon Workspaces client\*
- Reliable broadband internet connection
- External monitor (19"+)
- Ability to print frequently
- Ability to easily share keyboard & mouse (we suggest using external devices)
- All computers available day of setup for testing and end-of-day for processing

We will need to conduct a remote test of your computers several weeks before the course. Please provide PriSim with an IT contact to work with on this test.

**NOTE:** If after the test we determine there is an issue with your computers you will need to rent computers (we can assist with this by utilizing our nationwide vendor).

\* The two most common issues are that the application is blocked by security and/or it can't connect due to firewall rules.
